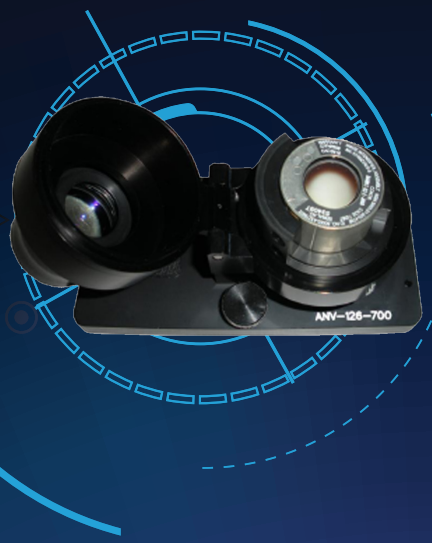
TEST EQUIPMENT

IMAGE TUBE TEST ADAPTER

Hoffman ENGINEERING



ANV-126-7XX

The ANV-126-7XX is a unique adapter system designed to provide users of the ANV-126 and ANV-126A Night Vision Device Test Sets with the ability to verify the performance of AN/AVS-9 and AN/AVS-6 image intensifier tubes.

The test set adapter encloses the image intensifier in standard goggle optics to simulate system performance, making the device easy to use and assuring accurate assessment. The system streamlines inspection, maintenance, and performance checks while eliminating possible electrical of physical damage to the intensifiers during testing.

Adapters are available for a number of different image intensifiers. Please contact a Hoffman Engineering representative to discuss your specific needs.

Product Specifications

- **Operation:** Used in conjunction with the ANV-126 and ANV-126A test sets
- **Power Requirements:** Power suppled by your ANV-126 or ANV-126A
- **Weight:** 1 lb.
- **Various adapters are available.**

Current Tube Adapters

ANV-126-700 — MX10160
ANV-126-701 — MX11769
ANV-126-702 — MX10130
ANV-126-703 — MX9644
